

The Satanic Temple announces ' Half of Satanists are LGBT ' -WTF-

Caution - This might trigger some insecure leftist liberals . It might melt some snowflakes. Logic and critical thinking usually do. Also ..the last 10 seconds of the video is really loud...Sorry

Lucian Greaves says in a recent interview ' half of Satanist are LGBT' .

I am seeing more and more people drugged/stalked/harassed/hacked/doxxed/deplatformed/pushed into using another OS or Alt-Tech and institutionalized for wrong think. These people have fricken VOIP phones and still wonder why it shows up unencoded/unencrypted by the Police scanner (must be a stalker). The rights are lost simply for expressing the First Amendment (Reprisal KST File , Post Patriot Act). The FCC controls the Radios, you make a schematic it gets other parts of the EMF band spectrum that the Government does not want you listening to ever, they only want us listening to Liberal or Puritanical Reuters and AP stories period. The government absolutely hates 528 or 666 Hz trolls that do not use a standardized 440Hz frequency tone, some even meditate to it as a spiritual guidance. That's why people read books on the Occult or Satanism instead. The Internet is IEEE 80211 or IEEE Ethernet owned by DARPA/DOD/DIA/CIA/Inqtel , They use Fuquid. That IEEE stuff is owned by A Corporate Government so therefore it is not a Free Press just like how our MSM/Radio/TV is totally controlled opposition. Simple Electronics does far more than watered down programming languages and shitty APK systemd files That can be hacked real easily and are also extremely locked/limited/easy to code. All Processor Architectures today have limitations in code and Remote Assistance disabling of kernel, In Windows and Mac NSAAKEY ADVAPI can wipe your HDD LOL. Any computer can be keylogged through a radio broadcast and another radio to record the signature waves going through the damn computer and it also has a BIOS/UEFI. We are talking simple Radio equipment, an FFT Spectrum Analyzer, High enough samples, there are a million ways to do it, even the black phone has pf/iptables flaw. They now call Programming Coding the New SJW Windows 10 3.7 GBRAM Generation. People still post on Youtube using only 20-80 MB of RAM and have no problem doing so. We know 6 or so companies control literally everything including this Internet Press MSM/Radio/TV, There are custom Schematics and Modulation Softwares/Circuits that get around the FCC, you can combine +16-20K/-16-20K to modulate/demodulate. All those Androids and Tablets are Locked, SDRs are even better they can render webpages and send files just like the Internet, They control everything we look at CIA/Inqtel/DARPA/ICANN/INTERNIC/IEEE/DIA/DOD/FEMA/DHS/NSA/FBI/DEA/INSCOM/CENTCOM/RAYTHEON/TAVISTOCK INSTITUTE/ADL/ACLU/DNC/GOP/all. The 90's internet is on Yandexru Archiveisorg (rotten/motherless/ebaumsworld/bestgore/mugshots/donnar-catering-and-the-like/uncle-sam's-snuff-factory/Charles Manson is also on there as well/Now type MKULTRA see what shows up.....) Before the Internet we had Pirate/Shortwave/Longwave Radio (LW worked on every Computer and Soundblaster Sound card, you modulate it and it is a radio that does not get censored by the FCC THE EMF band is limited by your government/corporate radios, they don't want you listening to those other stations, ever circuit bent a radio), Public Access, Fully Independant Publishers (Fact Sheet 5) that would print literally anything including a Gestapo Manual or how to Synthesize Crystal Meth with picture illustrations. Even the Conspiracy guys

were broadcasting weird stuff for 6 miles or so on a mountainside on literally "no income", Alex Jones LOL, so many others before that, Even non-religious heathenistic types that the 90's satanic panic hated as well. The big 6 corporate Media makes the brainwashing happen. The Parents or whatever shove their kids in front of the TV showing that World View Warfare bull crap. That temperance 90's then you had the new Leftist temperance of today. If you go to dol.wa.gov do you see new ID legislation to get everyone put in the system dependant on Government. Openssl has AES as 256 bit still can be cracked (hands-off), pf/iptables another fail, many BIOSes/UEFIs are a backdoor, Daemons and open ports, Ping Response, SSL and RC4 are already cracked, iSeries/vPro (remote radio), Systemd another one, Ping response and no uncommon one such as 192.168.1.254, sudo/su again, any kind of compiler esp java or python or ruby or c# is a backdoor. That is why people run the no-overhead one instead and disable radio or change CPUs and BIOS. If it is sold on the Internet they already put a HW logger in it anyways. esp eBay.
